Environment Information

1. Please use GOOGLE CHROME as your browser
2. SAP Build App URLs
 - o [SAP Build Apps](#)
3. Lab User Information
 - o User: **labuser<##>@vasscompany.com**
 - o Password: Newpa55!
4. Replace <##> with your Lab User Number assigned by the instructors

The screenshot shows a web interface for signing in. At the top left is the 'SAP' logo. Below it, the text 'Sign In' is displayed in bold, followed by 'SAP BTP subaccount SAP Build TDD v2'. There are two input fields: 'Email or User Name' with the placeholder text 'labuserXX@vasscompany.com' and 'Password' with a masked password '*****'. Below the password field is a checkbox labeled 'Keep me signed in' and a link 'Forgot password?'. At the bottom right is a blue button labeled 'Continue'.

Lab Goal

We will be building a Joule Agent that can review Opportunities within Salesforce.com and then create a corresponding Sales Order within S/4HANA. For this lab, we have already set up the 'Actions' which call the API endpoints in Salesforce.com and S/4HANA. Screenshots will be provided in the Lab Overview presentation. This is a very simple, self-contained scenario to demo the low-code environment where developers or analysts can create Joule Agents. This is not a production-ready scenario as all environments are distinctly different and require different inputs. This lab should provide a good, first, hands-on experience to encourage the lab user to explore more.

Create a Joule Skills

1. From the SAP Build Lobby click the Create button, then select *Create*

2. Select *Joule Agent & Skill* and click Next

4. Enter a name for your Joule Skill in the following format
5. a. Name: LABUSER##_AGENT

6. Click Review. Then click *Create*

- 8.
9. A new browser tab will open (suppress the pop-up blocker)
10. Accept the Disclaimer if shown.
11. Click **Settings** on the upper right

- 12.
13. Click on **Environment Variables** then select **Create**

- 14.
15. Create the Destination with the data below and click **Create** again
 - a. Identifier: SalesforceDest
 - b. Description: Sales Force Destination
 - c. Type: Destination

- 16.
17. Repeat for S/4HANA with the data below
 - a. Identifier: S4HANADest
 - b. Description: S4HANA Destination
 - c. Type: Destination
18. Confirm you have two environment variables for Destinations

- 19.
20. Next, Click on Dependencies, Click Add, Select 'Add an Actions Project Dependency'

- 21.
22. When prompted to Search, enter 'Opportunity' and select the Add button next to 'Fetch Negotiation Opportunities'

23. Add another Dependency for the 'Creates a sales order' by searching

25. Confirm you have two dependencies added and click Close

27. Next, we're going to create a Data Type to persist the results of the Salesforce API. Click the Create button again and select Data Type

29. Enter the following details and click Create
- Name: OpportunityList
 - Description: A list of opportunities from Salesforce

31.
 32. Click New Field when the Data Type is displayed

33.
 34. Enter the name 'API'

35.
 36. Select the Drop Down for Type and select the schema for the API.

37.
 38. Click Tab Button and the resulting API schema should be displayed.
 39. Click Save and then close the Tab for the Data Type

40. On the Overview screen, click Create > Joule Skill

42. Enter the following details on the Joule Skill
- Name: GetNegotiationDeals
 - Description: Retrieves a list of Salesforce Opportunities currently in the 'Negotiation/Review' stage. For each opportunity, it provides the Opportunity ID, the Deal Name, the associated Account Name, and a nested list of products (Line Items). The product data includes the Quantity, Unit Price, Salesforce Product Name, and the Product Code (Material) required for SAP S/4HANA mapping.

44. When the new Joule Skill opens select the "plus" sign below Trigger

- 46.

47. Select a *Call Action*

48. Search for 'Opportunity' and select the Action shown below

 50. When the Action is added select the Destination dropdown
 51. Choose your SalesForce Destination created above

 53. Click Save in the upper right.
 54. Next, Click on *Trigger* then select Parameters > Skill Outputs > Configure

57.
 58. Click *Add Output* and enter the following details
- Name: OppList
 - Description: Opportunity List
 - Type: Scroll to select your Data Type created above
 - List: Checked

59.
 60. Click *Apply*
 61. Note: The screen will take a few seconds to refresh. Click *Save* when the Output is shown.

62.
 63. Click on *End* in red
 64. Click on *Opp List*, then select *Single Item*

65.

66. Under API > Bind Object click into the box and select *results*

67.

68. Click Save again

69. Close the tab for the Joule Skill

70. Click Create > Joule Skill again

71. Enter the following details and click Create

- Name: CreateS4SalesOrder
- Description: Creates a new Sales Order in SAP S/4HANA based on finalized Opportunity data. It maps the Salesforce 'ProductCode' to the S/4HANA 'Material' field, sets the 'RequestedQuantity', and assigns the 'SoldToParty' based on the SalesForce field SAP_Sold_To_Party__c. This skill should be triggered only after the user confirms the line items retrieved from Salesforce are correct for order entry. The result is a confirmation of the sales order creation with the sales order number from the JSON result.

72. Select the Trigger, then select Parameters, Skill Inputs and Configure

73.

74. Enter the following Input Parameters

Name:	Description
CustomerRef	Customer Reference
SoldToParty	SAP Sold to Party
Material	SAP Material
RequestedQty	Requested Qty
RegQtyUnit	Requested UoM

75. Check Required for all parameters

76. Confirm you have entered the following and click Apply

77. Design Console (2)

78. Next, click the 'plus' sign below the Trigger

79.

80. Select Call Action

81. Search for 'Create' and select the 'Creates a sales order' action

82. Design Console (2)

83. Select your S4HANA Destination

84.
 85. Click the Inputs on your Action
 86. Map the Skill Input Parameters to the Action Input Parameters

87.
 88. Scroll Down to 'to_Item' and open the field
 89. Select 'Single Item' and map the parameters

90.
 91. Click the Save Button in upper right again
 92. After the Save is complete, click on Trigger.
 93. Select Parameters, and Skill Outputs

94.
 95. Click Configure
 96. Click Add Output and enter the following
 a. Name: SalesOrderNum

- b. Description: Sales Order Number
- c. Type: String
- d. Required: Checked

- 97.
- 98. Click Apply
- 99. Next, click on End, and click into the field SalesOrderNum
- 100. Browse the API Results and assign the field SalesOrder

101.

- 102.
- 103. Click Save

Create a Joule Agent

- 1. On the SAP Joule Studio Overview, click Create > Joule Agent

- 2.
3. Enter the following details
 - a. Name: SalesAssistant
 - b. Description: Acts as a Sales Assistant to bridge Salesforce and SAP S/4HANA. It identifies Salesforce Opportunities currently in the 'Negotiation/Review' stage, retrieves their associated product line items (including Product Codes and Quantities), and automates the creation of corresponding Sales Orders in the SAP S/4HANA system. Use this agent when a user wants to sync finalized deal data from CRM to ERP or check for pending sales transitions.

Edit information

Expertise and Instructions

Expertise: *
 Specify the area of expertise of the agent, for example an agent used for hiring and recruitment

e.g., Store Manager, HR Recruiter

Instructions: *
 Provide instructions on how the agent should perform its tasks and include examples of the expected results

- 6.
7. Text Detail

Expertise	Expert in Salesforce CRM Opportunity Management, specifically the 'Negotiation/Review' sales stage and related Opportunity Line Items. Proficient in SAP S/4HANA Sales Order processing (API_SALES_ORDER). Skilled in data mapping between CRM Product Codes and ERP Material Numbers, ensuring quantity and unit price alignment during the lead-to-order transition.
Instructions	Trigger: When a user asks to check Salesforce opportunities, call the GetNegotiationDeals action which will get a list of Opportunities and

	associated line items by Opportunity Name which includes SoldToParty as SAP_Sold_To_Party__c in the response. Data Retrieval: Extract the Opportunity Name, Amount, Account Name, SoldToParty and the nested OpportunityLineItems (specifically ProductCode and Quantity). Validation: Before creating an order in S/4HANA, display the list of found products to the user and ask: "I found these opportunities with items in Salesforce. Should I proceed with creating the S/4HANA Sales Order?" Mapping from Salesforce output to SAP required inputs for CreateS4SalesOrder: 1) Name to CustomerRef 2) ProductCode to Material 3) Set RegQtyUnit to 'PC' 4) Quantity to RequestedQty 5) SAP_Sold_To_Party__c to SoldToParty Execution: Once confirmed, call the S/4HANA Sales Order creation API and confirm with the resulting sales order number (salesordernum) Confirmation: Provide the user with the new S/4HANA Sales Order Number.

Overview SalesAssistant

Expertise and Instructions Model Settings MCP Servers **Tools** Agent Output

Tools

Add tools to provide the Agent with additional context or access to system data, and to perform actions for you.

No tools available yet

1 Add Tool

2 Calculator Documents Joule Skill Joule Agent

Design Console (3)

13.
 14. Add both Joule Skills you created

15. Click the Add button
16. Leave the defaults under Agent Output
17. Click Save
18. You're now ready to Test!

Test your Joule Agent

1. Click the Test Button on the upper right

2. Click the Test button
3. Enter the Destinations as shown
 - a. SalesforceDest: Salesforce
 - b. S4HANADest: S4HANACUST_API

4. Click the Test button
5. Click Continue, this will open a new tab
6. Enter a request that aligns with the instructions we gave above. For example "What are the opportunities in salesforce and the associated line items?"

7.
8. And a result

9.
10. Next test the S/4HANA Sales Order entry with "Lets create a sales order for the Labuser01 Opportunity"

11.
12. And confirm the results in S/4HANA!

13.

The screenshot displays the SAP S/4HANA Cloud interface for a Sales Order. The top navigation bar includes the SAP logo, 'S/4HANA Cloud', and 'Sales Order'. The main header shows 'Standard Order 178' with a 'Related Apps' button. Below this, a summary section provides key details: Sales Order: 178, Sold-to Party: Domestic Customer US 3 (17100003), Ship-to Party: Domestic Customer US 3 (17100003), Overall Status: Open, Rejection Status: Nothing Rejected, Credit Status: Not Performed, Net Value: 5,000.00 USD, and Approval Status: Not Relevant. A tabbed interface below the summary shows 'General Information', 'Items', 'Business Partners', and 'Process Flow'. The 'General Information' tab is active, displaying a table with fields for Sales Area, Customer Reference, Document Date, Billing Block, Delivery Block, and Created/Changed By/On/At. The 'Created By' field is highlighted.
