Executive Summary

Your Vision, Our Expertise

Goals

Our Commitment to Sustainable Success

Accelerating Your Journey to S/4HANA RISE: We understand your strategic imperative to transition to SAP S/4HANA RISE, unlocking agility and innovation. A "Clean Core" is paramount to maximizing the value and ensuring a smooth, efficient migration for your extensive global SAP landscape.

Expert Partnership for Clean Core Transformation: Vass offers specialized software development professional services to collaboratively navigate the complexities of your custom ABAP code. We will partner with you to analyze, remediate, and establish robust governance, ensuring your S/4HANA core is optimized for RISE.

Addressing Your Unique Scale & Complexity: We recognize the significant investment and customization within your current S/4HANA system. Our proven methodologies are designed to tackle large-scale remediation projects, minimizing disruption and tailoring solutions that preserve your unique business differentiators while adhering to Clean Core principles.

What is
"Clean Core"?

A clean core describes a system or a landscape of systems that is as close to standard as possible, while running cloud-compliant extensions and integrations

Understanding Your Challenge

The "Custom Code Conundrum" in a RISE Context

- Your extensive custom ABAP footprint, while historically valuable, now presents a **significant hurdle** to rapidly adopting and benefiting from S/4HANA RISE's continuous innovation model.
- Migrating a large volume of **bespoke code** to the SAP S/4HANA RISE environment inherently increases complexity, risk, and the potential for unforeseen delays in your transformation journey.
- Ensuring your vast array of custom developments remain compatible and performant through **future S/4HANA upgrades** within the RISE framework poses a continuous and resource-intensive challenge.

The "Clean Core" Imperative

- **Cloud Compatibility:** Ensuring custom extensions don't interfere with SAP's cloud operations and upgrade cycles.
- **Innovation Readiness:** Ability to seamlessly adopt new functionalities and technologies from SAP.
- **Reduced TCO:** Lowering costs associated with custom code maintenance, testing, and upgrades.
- **Increased Agility:** Faster response to business changes with a more flexible and standardized core.

02

Our Approach

Phase 1: Discover & Assess

Understanding Your Custom Code Landscape

Objectives:

- Identify all custom ABAP objects (reports, interfaces, conversions, enhancements, forms, workflows - RICEFW).
- Analyze code for S/4HANA compatibility (using tools like SAP Readiness Check, Custom Code Migration App, ABAP Test Cockpit - ATC).
- Assess code usage and business criticality.
- Categorize code based on SAP's recommended actions (e.g., keep, modify, obsolete, replace with standard/side-by-side extension).

Key Activities:

- Workshops with business and IT stakeholders.
- System scans and tool-based analysis.
- Usage data collection (e.g., UPL/SCMON).
- Creation of a comprehensive custom code inventory and assessment report.

Deliverables:

- Detailed Custom Code Analysis Report (including compatibility issues, usage statistics, and initial categorization).
- Prioritized list of objects for remediation including estimation.

Phase 1: Discover & Assess

Tools & Accelerators for Efficient Discovery & Assessment

Phase 2: Design & Remediate

Transforming Your Custom Code

Objectives:

- Develop a clear remediation strategy for each identified custom object.
- Execute code adjustments, deletions, or re-designs according to "Clean Core" principles.
- Leverage modern ABAP development paradigms and extension techniques (e.g., on-stack extensibility, developer extensibility using ADT, or side-by-side extensions on SAP BTP).

Our Target: On-Stack Extensibility

On exception: Side-by-Side Extensibility

Phase 2: Design & Remediate

Transforming Your Custom Code

Key Activities:

- **Technical Design:** Defining the "to-be" state for each custom object.
- **ABAP Development:**
 - Code adaptation for S/4HANA syntax and data model changes.
 - Performance optimization.
 - Implementing new extension techniques where applicable.
 - Decommissioning obsolete code.
- **Unit Testing:** Ensuring individual code changes function as expected.
- **Code Reviews:** Maintaining quality and adherence to standards.

Deliverables:

- Remediated and optimized custom ABAP code.
- Technical design documents (updated).
- Unit test scripts and results.

Phase 2: Design & Remediate

Accelerators & ABAP Development Tools

Custom Code Migration to SAP S/4HANA

- AI embedded in ABAP development tools
- AI-based explanation of legacy code
- AI-based explanation of S/4HANA related ATC findings and Simplification Items

- Released for
 - SAP BTP ABAP Environment as of release 2502
 - SAP S/4HANA Cloud Private Edition as of release 2025.

Phase 2: Design & Remediate

AI-assisted ABAP Development

AI-generated, refactored ABAP code proposal for
ABAP Cloud Compatibility

The screenshot displays the SAP IDE interface with a 'Review Changes' dialog box. The dialog compares the 'Original Source' with the 'Refactored Source' for the program 'S4H_100_dolinskaja_en'. The refactored code includes several changes to improve ABAP Cloud compatibility, such as replacing deprecated objects and updating type definitions.

Our ABAP Development Standards

Quality Assurance

- **CMMI Level 3 Defined Organizational Standards:**
Our ABAP development is guided by a well-defined and documented set of organizational standard processes, ensuring consistency, quality, and a structured approach to your Clean Core remediation project.
- **Standardized Clean Core & S/4HANA Best Practices:**
We apply established ABAP development standards tailored for S/4HANA and Clean Core principles, covering aspects like code quality, performance considerations for HANA, security guidelines, and appropriate extensibility techniques for RISE.

Phase 3: Validate & Deploy

Ensuring a Smooth Transition

Objectives:

- Thoroughly test remediated custom code in the context of business processes.
- Ensure seamless integration with the S/4HANA system.
- Manage the deployment of changes to production environments.

Key Activities:

- Support for Integration Testing (SIT) and User Acceptance Testing (UAT).
- Defect resolution and re-testing.
- Transport management and deployment planning.
- Go-live support for remediated objects.

Phase 4: Govern & Sustain

Maintaining a Clean Core

Objectives:

- Establish clear IT policies and procedures to ensure all future enhancements are "Clean Core" compliant.
- Empower the customer's team to maintain a clean system.

Key Activities:

- Workshops to define governance processes (e.g., for new development requests, use of extensibility options).
- Recommendations for ATC variant setup and usage for ongoing checks.
- Training and knowledge transfer to the customer's development and IT teams.

Deliverables:

- Clean Core Governance Framework document.
- Training materials.
- Recommendations for ongoing monitoring and compliance.

03

Project Governance & Management

Globally Connected, Locally Empowered Teams: Our governance model ensures seamless collaboration across your global locations and our development centers in Spain and Latvia, leveraging a "follow-the-sun" approach where beneficial, all managed through a central project management framework.

Clear Roles, Responsibilities & Escalation Paths: We will establish a transparent project organization with clearly defined roles for your global stakeholders, our onshore/nearshore coordinating team, and our development leads in Spain and Latvia, ensuring efficient decision-making and issue resolution.

Robust Communication & Reporting Cadence: A structured communication plan, utilizing modern collaboration tools, will provide regular status updates, progress tracking (aligned with Clean Core milestones), risk assessment, and financial reporting accessible to all global stakeholders.

Standardized Development & QA Processes Across All Locations: All development work in Spain and Latvia will adhere strictly to our CMMI Level 3 defined processes, Vass' ABAP development standards, and your specific quality assurance requirements, ensuring consistent, high-quality deliverables.

Cost

8 -Week Project
\$ 97,600 USD

Project Team Members	Skillset
Sr. SAP Technical Transformation Manager	Oversees assessment delivery, aligning project governance, scope, and milestones with executive stakeholder expectations. Ensures coordinated execution across workstreams, driving risk mitigation and actionable program planning.
SAP Technical Clean Core Architect	Leads the overall clean-core strategy. Defines which custom code should be retired, retained, or refactored. Ensures alignment with SAP's Clean Core and Keep the Core Clean methodologies. Deep understanding of SAP BTP extensibility models (Key-User, Side-by-Side).
ABAP Developers / Custom Code Analysts	Performs static and dynamic analysis of custom objects. Uses tools like SAP ATC (ABAP Test Cockpit), SCI (SAP Code Inspector), and CCLM (Custom Code Lifecycle Management). Maps code usage, modification layers, and compatibility with S/4HANA.

**Depending upon what HPE owns, additional SAP licenses/consumption might be required*

BACKUP

Why VASS?

The VASS SAP approach

Accelerators & Packaged Offerings

Proven, industry-tailored accelerators reduce risk, speed up deployments, and maximize SAP investments

Business-first Solutioning

Focused on driving business outcomes with deep sector expertise, real-world business experience, and global insight

**Trusted and Proven
SAP Partner**

**Business-Driven Solutions. Global Reach.
Agile Execution.**

SAP Thought-Leaders

Leading SAP innovation with expert insights, cutting-edge solutions, and proven actionable strategies for business transformation

Creative Delivery via Smartshoring

Our US-based Senior Consultants partner with our "Smartshore" centers providing high-quality cost-effective delivery for both projects and AMS

Global Reach

We are **5000+ teammates** strong operating in 40+ countries across 4 continents

Solutions at-a-glance

Core SAP Service Offerings

**SAP S/4HANA**

S/4HANA implementations of S/4HANA for GROW and RISE. Lift & Shift. Strong use of Signavio and other SAP accelerators.

**BTP & BDC**

Clean-core technical-debt initiatives. Discovery/"what work is required" Phase 0. SAP Data/BDC migrations and datalake design and deployment.

**Industry 4.0 (AI)**

Integrate digital technologies such as IoT, AI, machine learning, and data analytics into processes enabling business opportunity unlock.

**Managed Services**

Comprehensive 24x7 SLA-based SAP Application Managed Services (and more) via partnered, customer-centric approach.

**CX + FSM**

Deep SAP CX and FSM expertise delivering connected customer journeys and optimized field service management operations.

Proven SAP Experience and Expertise
